

DO NOT SCALE

## Notes

The Newton Titan-Pro Sump is specifically designed for use with the Newton CDM System, for the removal of clean ground water and includes many unique features.

The neck of the sump receives standard manhole covers and lids, and is supplied with the Clark-Drain CLKS 450SR/46SL round to square lockable cover to give the installer the largest number of finishing options available, and the adjustable neck allows for a perfect finish to all floor depths.

The sump has pre-formed inlet and outlets for Newton Basedrain and the Newton pumps for easy installation. Its unique shape is designed for simple and easy installation to both wall and corner.

The top flange facilitates easy finishing of the floor membrane with flat tape joints.

As well as the standard clean water pumps a specialist pump for the removal of grey water can be specified.

To access further details and relevant technical information please call our Technical Team on 01732 360095 or refer to our [website](#).

Newton CDM System

Newton Titan-Pro sump with dimensions
